

GRONEN Conference 2022

Strategy for Carbon Neutrality

The GRONEN 2022 conference intends to be carbon neutral by:

1. Implementing carbon reduction strategies in accordance with the general carbon reduction strategies of the University of Amsterdam (see [here](#) for more information).
2. Ensuring that the remaining main CO₂ emissions related to the conference are offset by investing, through the Climate Neutral Group, in a Gold Standard renewable energy project (see [here](#) for more information). This includes the following measures: *
 - a. Providing participants with the opportunity to voluntarily offset their flights' carbon emissions during registration.
 - b. Committing to offset the estimated emissions of participants travelling by other means of transport (train, coach, car) and participants' hotel stays.
 - c. Committing to offset the main CO₂ emissions related to catering and internal operations like energy and paper usage.
3. After the conference, carbon offset contributions by participants will be invested, through the Climate Neutral Group, in a Gold Standard climate project (see [here](#)). Participants will receive a carbon offset certificate after the conference.

*All calculations related to CO₂ emissions will be guided by the Events Calculator Developed by the Climate Neutral Group (see [here](#) for more information).

We look forward to welcoming you to Amsterdam in 2022!
