16th International Conference on ADHD, May 13th & 14th 2023

Is it possible to reduce the impact of ADHD and its associated comorbidities on a patient's life?

Dear friends and colleagues,

We cordially invite you to the **16th International Conference on ADHD**, taking place in Berlin on May 13th & 14th 2023.

ADHD is a commonly occurring neurodevelopmental condition which can be recognised, diagnosed and effectively managed by healthcare professionals. However, ADHD can pose significant challenges throughout the lives of patients, their families, friends and colleagues.

Healthcare professionals can help to reduce the progression of the condition and its impact on personal development - whether through providing early stage individual support, recognition and prioritisation of co-morbidities or personalised treatments that help to alleviate negative symptoms while protecting the person's ADHD "talents".

During this conference we will explore how each of us can effectively support patients of all ages to make their experience with ADHD better; discussing how we can work together to prevent the negative implications of the condition from controlling the patient's future, preventing a lifetime of negative outcomes and challenges, as well as releasing the potential held inside each and every ADHD patient.

As always, the goal of this conference is to encourage professional discussion and scientific engagement, so we look forward to your participation.

Prof. Dr. Dr. Tobias Banaschewski

Prof. Dr. Manfred Döpfner

Prof. Dr. Alexandra Philipsen

Prof. Dr. Diane Purper-Ouakil

A G E N D A

Is it possible to reduce the impact of ADHD and its associated comorbid conditions in children, adolescents and adults?

Saturday, May 13th 2023
