

Summary Jakob Stokholm

Jakob Stokholm, MD, is an associate professor at COPSAC and University of Copenhagen. Jakob Stokholm's research area can be described as clinical translational research combining basic research methodologies and bioinformatics approaches mainly from the microbiology field with clinical data from birth cohort studies. The research has especially contributed to the understanding of how the microbiome in pregnancy and early life is shaped, and affected by factors such as antibiotics and delivery mode, and whether these factors as well as the microbiome and virome can change risk of asthma and allergy. He is leading the microbiome group at COPSAC.
